Luxembourg AI Factory:

YOUR ONE-STOP SHOP
FOR AI ADOPTION

The Luxembourg AI Factory is the one-stop shop **empowering businesses** of all sizes and maturity levels to harness the transformative power of artificial intelligence.

Anchored by the sovereign **MeluXina supercomputer** and a holistic public-private ecosystem, we deliver personalized guidance and AI-ready infrastructure.

From AI maturity assessments and tailored training to regulatory compliance, our end-to-end services ensure your AI journey is **secure, trustworthy, and aligned with European standards.**

Who are the partners behind the Luxembourg AI Factory

Five core partners working together to support your **AI journey**

○ Luxinnovation

Your single entry point: guides you through funding opportunities and connect you to the right partners, and coordinate all business support services across the national AI ecosystem.

○ LuxProvide

Gives you access to the MeluXina supercomputer and the high-performance computing power needed to scale your AI solutions.

○ University of Luxembourg

Develops AI skills and talent through training and research programmes.

○ LNDS

Helps you access high-quality, compliant data for your AI projects.

○ LIST

Brings research expertise to turn innovative ideas into practical solutions.

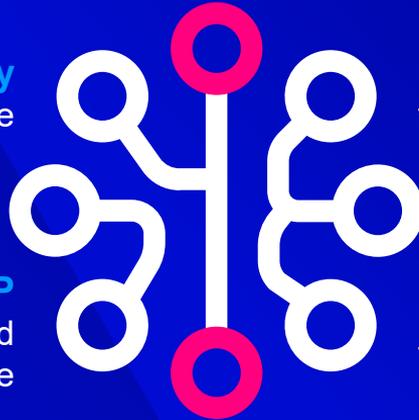

Who are the partners behind the Luxembourg AI Factory

With seven associate partners

Luxembourg House of Cybersecurity
for cybersecurity sector expertise

Technoport for startup incubation

Clarence and DEEP
for national sovereign cloud
and connectivity infrastructure

Digital Learning Hub
for AI education and training

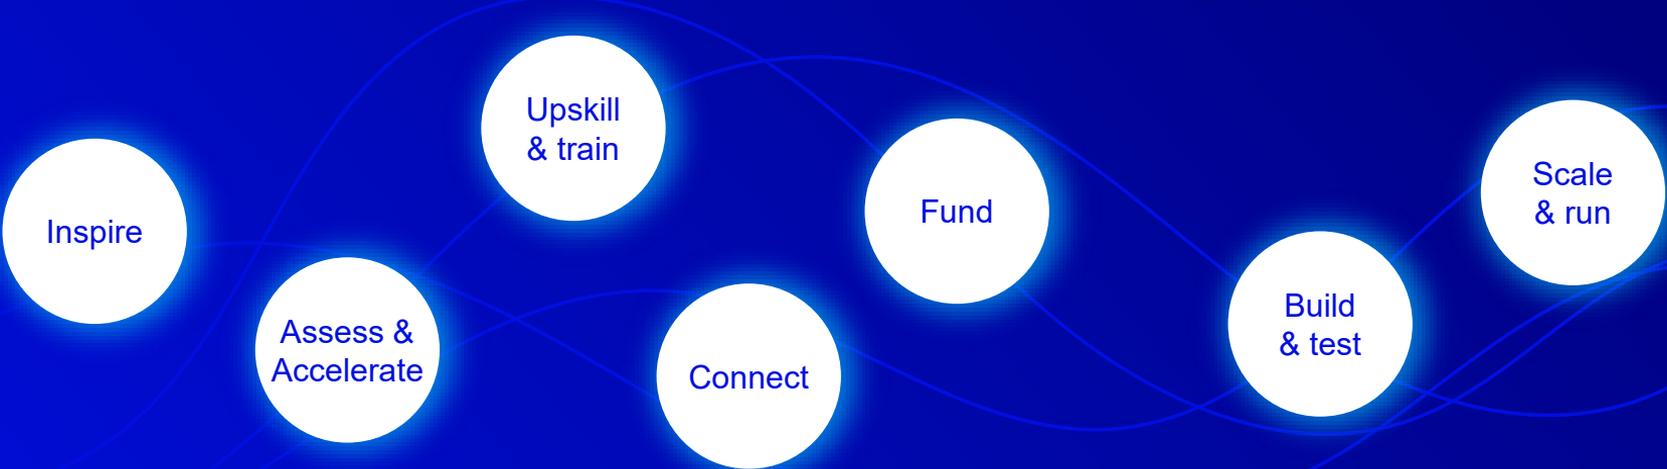

Luxembourg House of Financial Technologies for finance sector expertise

Luxembourg Space Agency
for space sector expertise

Services to support companies
along the

AI journey

Service catalogue

EuroHPC
Joint Undertaking

Co-funded by
the European Union

This project has received funding from the European High Performance Computing Joint Undertaking (JU) under Grant Agreement No. 1010224569. The JU receives support from the European Union's Horizon Europe research and innovation programme and from Luxembourg, Belgium, Croatia, Greece, Hungary, Ireland, Italy, the Netherlands, Poland, Portugal, Slovenia and Spain.

Senior Data Scientist – Luxembourg National Data Service (LNDS)

▶ Luxembourg AI Factory Data Cataloguing

▶ **ENDORSE**

THE EUROPEAN DATA CONFERENCE ON REFERENCE DATA AND SEMANTICS

Why a datasets catalogue for L-AIF?

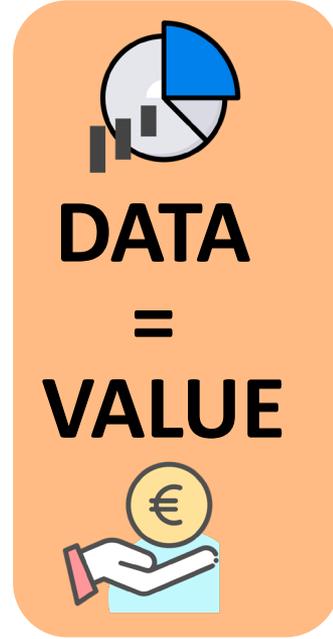

Datasets specifically suited to AI contexts

What is “AI-ready” data?

- Dataset size: min. of several 100k records or data points
- Dataset quality: minimal quality standards including
 - conformance with domain-relevant standards
 - completeness and documentation of any pre-processing

Preference towards **non-open data** but **all datasets are welcome!**

Use of a dataset in **successful AI model development or testing** is a bonus

Data cataloguing ingredients

Metadata* model

What metadata do you need to collect?

**Cataloguing
infrastructure**

Where do you collect the metadata?

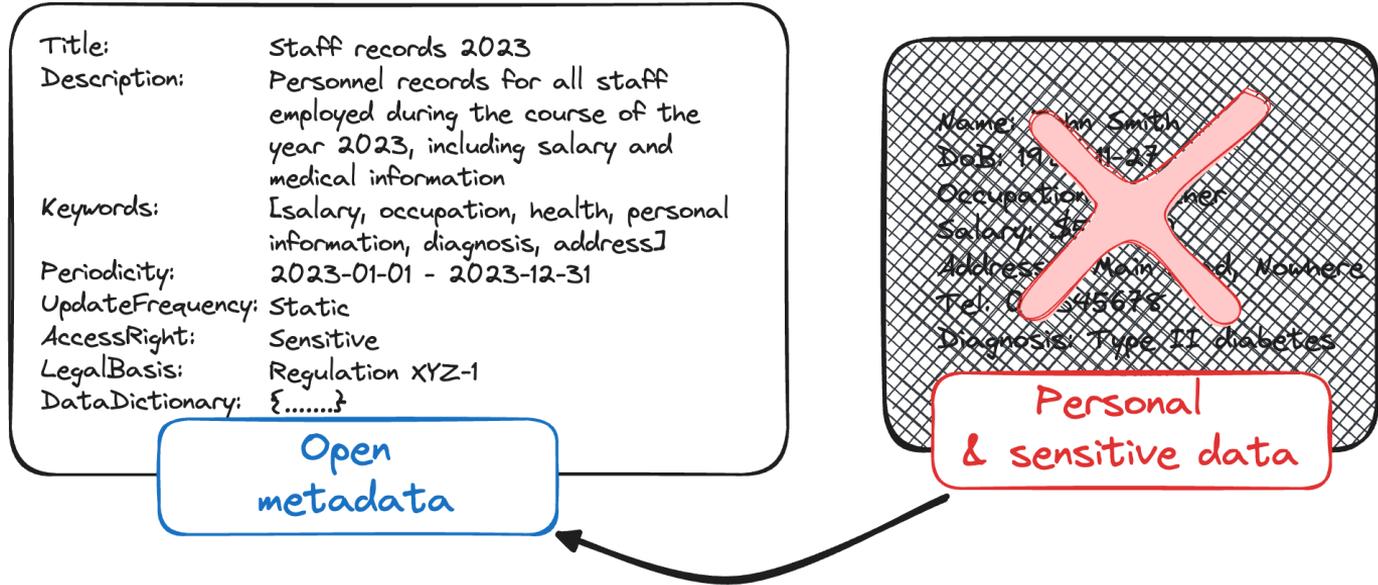

**Cataloguing
processes**

How and when will the metadata be collected?

* Metadata:

- is “data about data”, i.e. describes the characteristics of a dataset
- helps users find, understand and use datasets

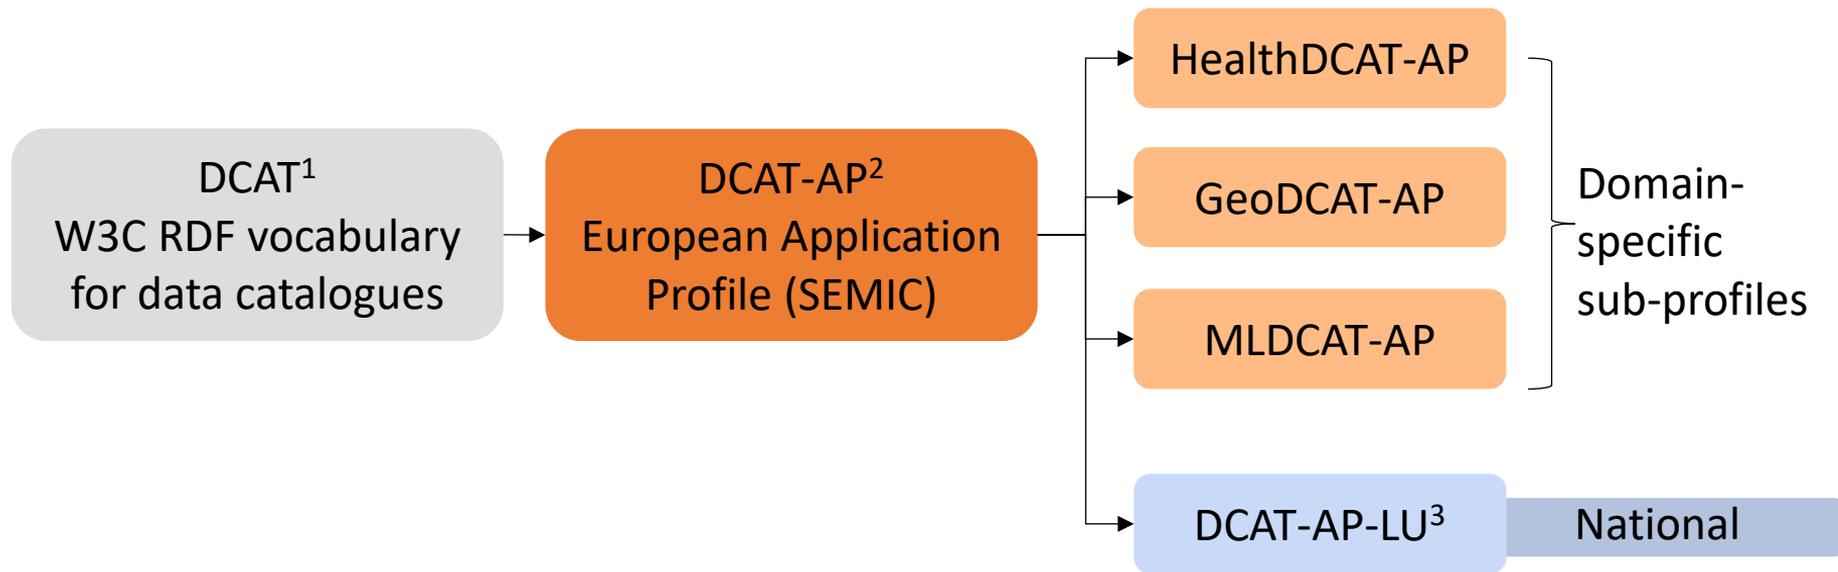

Restricted data yet open metadata

Metadata describes the data but does NOT disclose its content

The Data Catalog Vocabulary (DCAT) metadata ecosystem

DCAT – Data Catalog Vocabulary

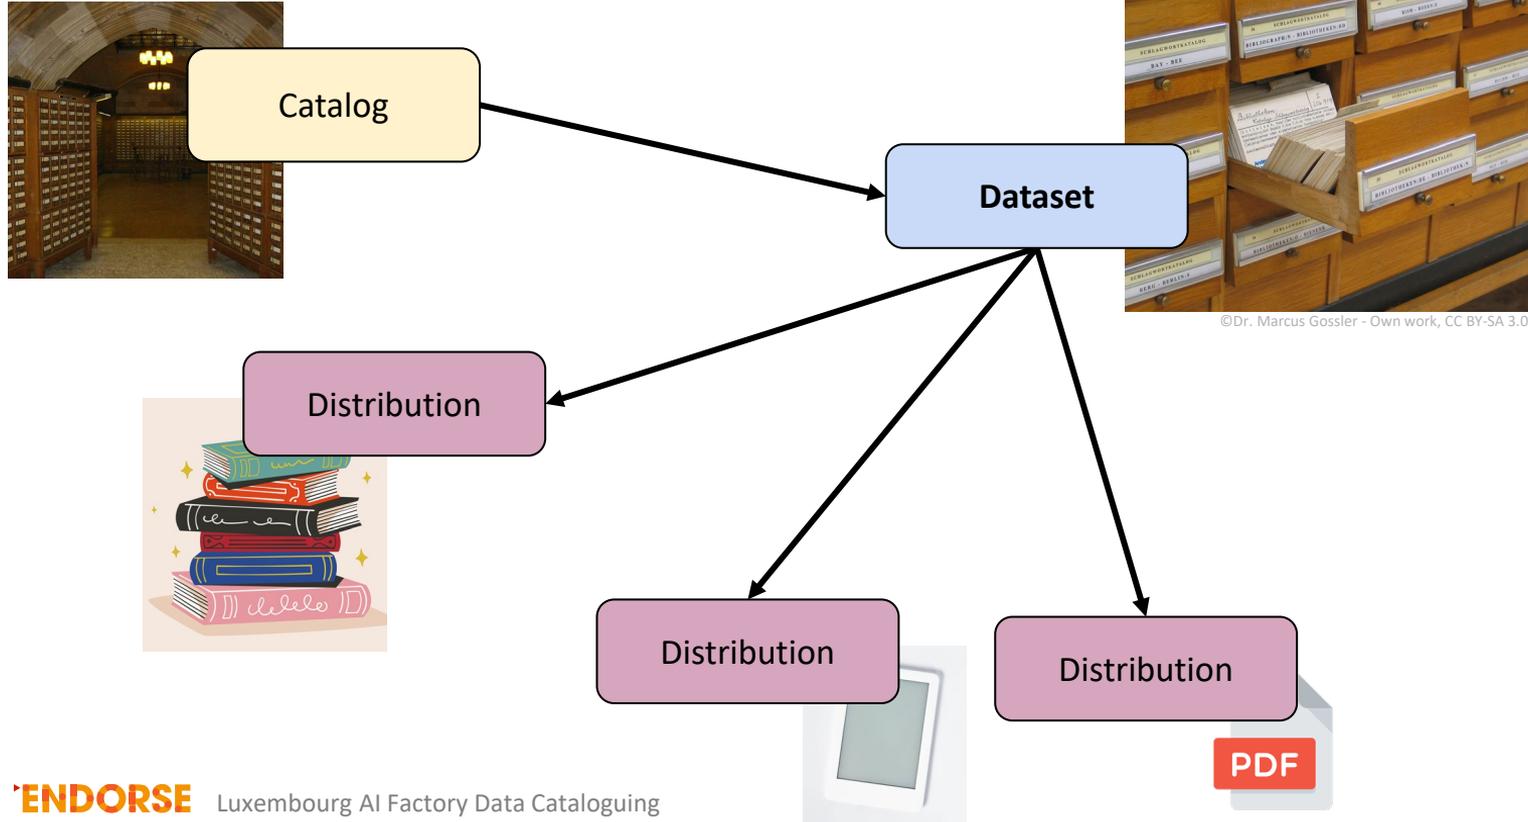

DCAT focuses on domain-agnostic properties to describe datasets

1 DCAT: <https://www.w3.org/TR/vocab-dcat-3/>

2 DCAT-AP: <https://semiceu.github.io/DCAT-AP/releases/3.0.1/>

3 DCAT-AP-LU: <https://mindig.lu.gitlab.io/DCAT-AP-LU/>, 2.0.0

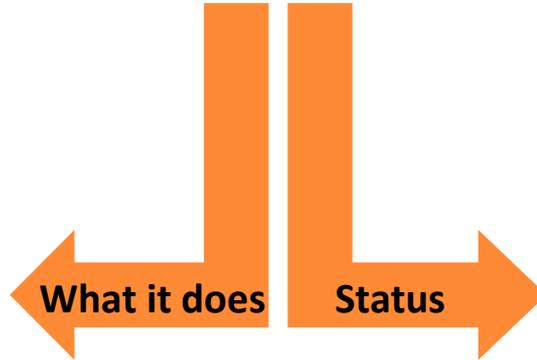

DCAT - core concepts

MLDCAT-AP

- **Reuses** standards such as ML Schema (ML-S)
- **Adds** ML-specific entities: algorithms, ML models, benchmarks, performance metrics and risk metadata

- Under development: collaboration between SEMIC and OpenML
- Specification: <https://semiceu.github.io/MLDCAT-AP/releases/3.0.0/>

L-AI Factory Datasets Catalogue II

Catalogue features

Basic

Data discovery via search + filter, summary metadata views, machine-readable metadata exports

Extended

“Shopping basket” for submitting data access requests (not currently available)

Metadata collection:

LNDS in-house MetaData Capture tool (MDC):

<https://metadata.demo.lnds.tech/>

The Legal Large Language Model (4LM) project

Legal Large Language Model (4LM) project

What is it?

- Writing and review assistance for legal experts

Who is involved?

- In the scope of a wider governmental AI initiative
- LNDS & LuxProvide (LXP) collaborate on the proof of concept
 - LXP infrastructure (MeluXina)
 - LNDS (RAG pipeline)

Status:

RAG (retrieval-augmented generation) is in place.
Now tweaking, tuning,
alpha tester feedback
