(10) Disqualification ~~☒~~ from the right to stand as a candidate ~~☒~~ may be ordered by an individual decision of the authorities either of the Member State of residence or of the home Member State. In view of the political significance of the holding of elected municipal office, Member States should be entitled to ⇒ obtain information from the home Member State related to the deprivation of the right to stand as a candidate in the candidate's home Member State. ⇐ take the steps necessary to ensure that a person who has been deprived of his right to stand as a candidate in his home Member State is not enabled to recover that right merely by virtue of his residence in another Member State; whereas this problem, which is specific to non-national candidates, is important enough to justify a provision under which those Member States which consider it necessary are allowed to make such candidates subject not only to the rules on disqualification of the Member State of residence but also to those of the home Member State; whereas, in view of the principle of proportionality, it will be sufficient if the right to vote is made subject only to the rules on disqualification from voting of the Member State of residence;

- (9) [According to scientific advice, European seabass (*Dicentrarchus labrax*) in the Celtic Sea, Channel, Irish Sea and southern North Sea (ICES divisions 4b, 4c, 7a, and 7d to 7h) remains in a perilous state. Spawning-stock biomass has been declining since 2005 and is now below Blim. Fishing mortality has increased over the time-series, peaking in 2013 before a rapid decline to below the fishing mortality that results in the maximum sustainable yield (FMSY). Recruitment was estimated to be poor since 2008, with the exception of the 2013 and 2014 year-class estimates which show average recruitment. ICES advises that when the maximum sustainable yield (MSY) approach is applied, total removals in 2019 should be no more than 1789 tonnes, which is an increase compared to the 2018 advice. Therefore, higher catches could be allowed for hooks and lines fishery for this species. It is also appropriate to continue the set of measures for unavoidable by-catches of European seabass with certain other gears, while providing a limited increase in the catch allowances. Measures for managing recreational fisheries for European seabass should be adapted, taking account of the significant impact of such fisheries on the stocks concerned. Within the limits of the scientific advice, the catch-and-release practice and bag limit should continue, but should be applied for a longer period. *To be reviewed after the ICES advice* (highlighted in yellow)]
